

# HEMOPHILIA NURSING CARE PLAN

Assessment	Nursing Diagnosis	Goal/Expected Outcome	Intervention/Planning	Implementation	Rationale	Evaluation
<p><b>Subjective Data:</b> Patient reports joint pain and swelling after minor trauma.</p> <p><b>Objective Data:</b> Visible bruising and joint swelling noted.</p>	<p>Risk for Bleeding related to deficient clotting factors as evidenced by hemarthrosis and bruising.</p>	<p><b>Short-Term:</b> Minimize bleeding and pain within 2 hours.</p> <p><b>Long-Term:</b> Maintain stable joint function and prevent recurrent bleeding.</p>	<p>Administer clotting factor replacement therapy as prescribed; monitor for signs of bleeding.</p>	<p>Provide IV or subcutaneous clotting factor replacement; assess joint status every 30 minutes.</p>	<p>Early intervention can reduce the extent of bleeding and prevent joint damage.</p>	<p>Reduced swelling and pain; no new bleeding episodes noted.</p>
<p><b>Subjective Data:</b> Patient expresses concern over managing bleeding episodes at home.</p> <p><b>Objective Data:</b> Patient demonstrates uncertainty about self-care practices.</p>	<p>Deficient Knowledge regarding hemophilia management as evidenced by expressed concerns and lack of self-care confidence.</p>	<p><b>Short-Term:</b> Patient verbalizes understanding of hemophilia management within 24 hours.</p> <p><b>Long-Term:</b> Patient independently follows self-care guidelines to prevent bleeding.</p>	<p>Develop a comprehensive education plan; provide written materials and hands-on demonstrations.</p>	<p>Conduct individual teaching sessions; use visual aids and interactive learning.</p>	<p>Educated patients are more likely to adhere to treatment and prevent complications.</p>	<p>Patient correctly explains self-care measures; demonstrates proper technique in clotting factor administration.</p>
